FIFTEENTH DECEMBER,
NINETEEN THIRTEEN.

Dr. R. A. Falconer,
President,
University of Toronto,
Toronto, CANADA.

Dear Sir,

Attached you will find an article written by myself, which is being sent for publication to the various Electrical papers, and to the Principals of the well-known Universities throughout this Continent.

The subject is one that is of vital interest to those who are following the application of applied science which deals more particularly with the application of Electricity.

Realising your high position in the educational world, I take the liberty of sending this article to you, asking you to read same carefully, and if you think my idea that certain suggestions in the same be adopted in the curriculum of Electrical Engineering as taught in your University, I shall be grateful, and I am sure all those who are in any way connected with Electrical work will feel likewise.

The subject matter of my article is one that it is very hard to give prominence to, because it is one that has been tabooed in the past for obvious reasons, but I believe in view of the continued fatalities, it is a subject that should be given more prominence.

Trusting I am not taking too much of your valuable time, and as a professional man, may I take this opportunity of giving you my small quota

-2-

of thanks for the great work you are doing in
educating the future makers of Canada.

I remain,
Yours very truly,

Charles F. Gray.

C. E. Gray, Esq.,

1005 Union Trust Building,

Winnipeg, Man.

My dear Sir:

I have just read your memorandum regarding accidents caused by carelessness in the handling of electrical apparatus. It contains information of such value and interest, and I am forwarding it to the Head of our Electrical Department that he may have the opportunity of considering the matter.

Yours sincerely,

President.
